

BI-WEEKLY REPORTS - TEAM 18 -PLACED2

Until 12 December 2015

TEAM MEMBERS: Anastasia Arvika Christy, Anita Ghoddoomi-Zadeh

SUMMARY TO DATE

Analyzing Research

- We closed the online questionnaire and began our analyzing process.
- Online Questionnaire:
 - We collected the data and received a total of more than 56% respondents out of 2nd year students.
 - We separated our results based on three factors: skill improvement, client communication and gender factor.
 - We structured our report in background, methodology, result and discussion of findings.
 - We filtered all of the results and displayed it on our website. We made the data attractive using colorful graphs and interesting fixtures.
- One-on-one interviews:
 - We analyzed our one-on-one interview and summarized it into simple bullet points.
 - We highlighted significant findings to be used to improve our platform and development.

Website Development

- We created our website using HTML/CSS and JavaScript based on a template.
- We divided our website into six different sections; Home, Project, Research, Documentation, Prototypes and Testing.
- The core area of our project is research. We believe this area is what makes our team different than other teams as we conducted our own research by building the questionnaire, distributing and analyzing it by ourselves.
- All of the resources and the sample questionnaire is attached on the documentation section to give a brief insight to our project.

Video

- The structure of our video is based on the overall summary of our project.
- We display the demo of the skeleton prototype and platform mockup.

Technical Aspects

- We were given the access to the original skeleton of the AngularJS part on the website of our client.
- We were given a brief explanation of how the code works on the website and made a plan on how to get used to the actual original environment made by Project Placed.

MEETING DETAILS/ SUMMARY

Team meeting 2 (Lab) – 3rd november 2015

Place: Lab 1.21 Roberts Building UCL

We arranged a meeting with our client (last meeting of the term) and planned our strategy to finish all of the commencing deadlines. We reviewed our previously designed team website and discussed task distribution.

Client meeting – 7th December 2015

Place: Engineering Café, Gower Street

Attendee: Niall Roche

We updated our client with the progress we had made and presented the team website that consists of our progress in the past week. We presented our mockup to him, and he gave good reviews and constructive feedback on how to improve the design and UX, and what features we should add.

The client gave a preview of the actual code (AngularJS and Django) and gave us suggestion on how to work on our actual prototype before the final presentation in January. Approval of the platform structure was also made.

Team meeting 2 (Lab) – 10th December 2015

Place: Lab 1.21 Roberts Building UCL

We reviewed all our work for the final submission. We have built our website and are continuing to finalize the structure of our video. We have scheduled a review meeting to get feedback on our progress.

Review Meeting – 11th December 2015

Place: Gower Street Office

Attendee: Graham Roberts

The meeting is conducted to keep track on our progress and receive feedback from the supervisor. We went through all of the context of our website and explained the brief purpose of our platform. Since the supervisor is familiar with Project Placed, it was easier for him to connect with the project and give suggestions on the future steps.

IN PROGRESS

- We are currently planning the project work that we will be doing over the winter break.
 - We have assigned some responsibilities to each member, in preparation for the next term when we will start to build the final prototype.
 - We are both going to start to learn the Ionic framework and how it is going to be deployed with the current platform in project placed.
 - Presentation on January will also be prepared as we are planning to build our actual prototype using real coding skills during the break.
 - We will also set up the next meeting with our client right after the break.
- Result from Dean and fellow 4th year students will also need a follow up.

MEMBERS REPORT

Vika

I have been working on designing and managing the website and worked on the context as well. The context that I have been working on is the research, documentation, and managing the user interface. I finalized the final research analysis and displayed it in a form of graphs and statistics. Before the winter break, I suggested to create a displayed Gantt chart so our team can be more organized in the next term. I created the graphics for the team video and was responsible to do the clippings and final edits.

Anita

I made a list of requirements for the platform and worked on creating an interactive mockup using Balsamiq to show how the platform will look and how it would work functionally. I also looked into the techniques and tools/frameworks that we would need to use in the 2nd term. I contributed to the video by writing the script and doing the recordings.
