

# BI-WEEKLY REPORTS - TEAM 18 -PLACED2

*Until 29 January 2016*

**TEAM MEMBERS:** Anastasia Arvika Christy, Anita Ghoddoomi-Zadeh

## SUMMARY TO DATE

- From the previous term, we have our requirements and our completed mockup.
- We have conducted some general research on methods of showing project progress (looking at methods including gantt charts, timelines and kanban boards).
- We have been given access to the database by our client so we have started to look at the data (identifying what will be of use to us).
- We have begun the implementation of the front side of the platform (using AngularJS).
- We have conducted an elevator pitch in front of multiple clients about the platform and our feature.

## MEETING DETAILS/ SUMMARY

### Team meeting 1 (Lab) – 19<sup>th</sup> January 2016

Place: Lab 1.05 Roberts Building UCL

We planned the presentation slides for the elevator pitch to be presented to our client. We also working on our implementation in AngularJS, starting with an attempt to implement a Gantt chart using Angular Gantt, although we are also looking at alternatives to Gantt charts as well.

### Client meeting – 20<sup>th</sup> January 2016

Place: Meeting Room 16, Henry Wood House

Attendee: Niall Roche, Tabitha Goldstaub, Sean Blundell

We updated our other client, who could not attend the last meeting with us, with the progress we had made and presented our team website that consists of our prototype and all of our research analysis. The clients were satisfied with the progress we have made and gave additional suggestions for the design (for example, changing the Gantt chart to a timeline). We received the database resources and our team has decided to approach the project by working on the front end first (and focussing on the backend later). We also

showed them the Elevator Pitch slides and received some great feedback about the content on the slides. We scheduled two skype calls with them to practice before the actual elevator pitch.

#### Skype Call meeting 1 – 26<sup>th</sup> January 2016

Place: Malet Place UCL

We presented the first draft of the script and made sure the client agreed with the content that we would be presenting (the script), as we would be acting as representatives for Project Placed.

#### Team meeting 2 (Lab) – 27<sup>th</sup> January 2016

Place: Lab 1.05 Roberts Building UCL

We had a final practice for the elevator pitch (without the script) and prepared for the final skype call with our client. We were working on the AngularJS implementation by implementing the basic structure of the page (and prioritising the features we wanted to place first).

#### Skype Call meeting 2 – 27<sup>th</sup> January 2016

Place: Malet Place UCL

A further rehearsal for the Elevator Pitch. We updated the client with the materials that was going to be presented the next day. We also discussed about the other display option for the timeline feature.

### IN PROGRESS

- We will be continuing to work on the structure of the main page. We want to research and gather a few ideas on which tools we can implement to show the progress of the project (as we were looking at alternatives to the gantt chart)). We have already gathered some ideas but we want to interview and ask some students for their opinions as well.
- We are continuing our implementation - we aim to have a basic implementation of the page finished by the end of the upcoming week (implementing the basic structure and the key features). We would then like to have a review with our

clients, finish the implementation of the front end, and then start to focus on the backend.

## MEMBERS REPORT

### Vika

For the past weeks, I have the responsibility to keep in touch with our client by updating them with our progress. I have started developing with AngularJS to build the main page and creating the structure of the page. I was also working on the presentation slides for the presentation and worked with Anita for the Elevator Pitch.

### Anita

Over the past two weeks, I have been continuing with the research with regards to the structure of our platform and the implementation of the front end. I've started to use AngularJS to set up the page and was working on the Gantt chart using the Angular Gantt component. As well as this, I was rehearsing and preparing for the Elevator Pitch.to the video by writing the script and doing the recordings.
